VERSION HISTORY TABLE 7

CITATIONS 8

Purpose

This procedure provides clear, step-by-step instructions to create, approve, provision, verify, and document new user accounts at SnowBe in a secure, consistent, and auditable manner. It ensures users receive only the minimum access required to perform their duties while meeting identity, logging, and compliance requirements.

Scope

This procedure applies to all SnowBe employees, contractors, interns, service accounts, and retail staff who require access to SnowBe systems. It covers identity creation in SnowBe's identity platform, role-based access assignments, access to AWS resources and SaaS applications, and retail systems where applicable.

Definitions

Access Registry

SnowBe's authoritative system-of-record that tracks every user account, the roles and privileges assigned to it, the systems it can access, and the ITSM ticket used to create or modify the account.

Attestation

The formal process in which a manager or system owner confirms that a user's access remains appropriate and necessary for their current job responsibilities.

Identity Management Platform

SnowBe's centralized system which is used to create, update, disable, and monitor user accounts and enforce authentication and access controls.

IT Service Management (ITSM) System

SnowBe's online ticketing and workflow platform used to submit, track, approve, and document account creation requests.

Least Privilege

A security principle that ensures users receive only the minimum access required to perform their job duties and nothing more.

Multi-Factor Authentication (MFA)

A security requirement that asks users to confirm their identity using at least two factors, such as a password and a verification code from a mobile device.

Privileged Role

An administrative or elevated access level that allows a user to make configuration changes or access sensitive data beyond standard permissions.

Role-Based Access Control (RBAC)

A method of assigning permissions according to job functions, where users inherit access from predefined roles instead of individual entitlements.

Service Account

A non-human account used by automated systems or applications that requires secure credential storage and an assigned owner for accountability.

Temporary Credentials

Short-lived passwords or authentication tokens issued during onboarding that allow a user to sign in for the first time and must be changed immediately upon initial login.

Roles & Responsibilities

Application Owner

Defines which roles and permissions are necessary for a given application, approves elevated access above the baseline, and ensures application security settings remain compliant.

Hiring Manager

The person who Initiates the new account request, confirms required systems and access levels, verifies successful login on the first day, and completes the initial access attestation.

Human Resources (HR)

Human Resources verifies employment eligibility, confirms identity documentation during onboarding, and authorizes the account request only for approved hires.

Information Security Department

Reviews requests involving sensitive or privileged access, enforces MFA and password standards, ensures activity logging, and validates compliance with SnowBe's policies and applicable regulations.

IT Service Desk

Carries out the technical steps to create and configure user accounts, communicates credentials through secure channels, verifies MFA enrollment, and closes the ITSM ticket with documentation.

Network Administrator

Provides secure network access such as VPN or store-level connectivity, validates that new users can connect to SnowBe systems, and ensures network activity is properly logged.

System Owner

Approves access to the systems under their control, validates licensing and security restrictions, and accepts responsibility for maintaining the system's integrity.

User

Completes onboarding activities, secures their credentials, enables MFA, acknowledges SnowBe's Acceptable Use and Security policies, and reports any access issues or policy violations promptly.

Procedure

The following materials and approvals are required before beginning the new account creation procedure:

- Verified identity proofing documents (e.g., government-issued ID or HR onboarding record).
- An approved IT service management (ITSM) ticket containing the Hiring Manager's approval.
- A role mapping document that defines access privileges based on the user's job function.
- An MFA-capable device with access to SnowBe's approved authenticator application.
- Network connectivity to SnowBe's corporate VPN or secure onboarding portal.
- Access to SnowBe's identity management platform.
- Welcome communication templates and onboarding acknowledgment forms for documentation.

1. Submit New User Request Ticket

1. The Hiring Manager submits a "New User Account" ticket in the ITSM system at [<https://itsm.snowbe.com>].
2. Include the user's full name, job title, department, start date, and required systems.
3. Attach HR onboarding confirmation to the ticket before submission.
 - Tip: Always verify that department and location details are accurate to prevent incorrect access assignments.

2. Obtain Required Access Approvals

1. Obtain HR approval and authorization from each System Owner for requested applications.
2. Secure Information Security approval for privileged or sensitive roles such as Administrator, Power User, or Financial Systems.
 - Warning: Never assign elevated or administrative access without written approval from both Information Security and the relevant System Owner.

3. Complete Identity Verification Process

1. Validate the user's identity against HR records and approved documentation.
2. Record the verification results in the ITSM ticket before account creation.
 - Tip: Double-check the spelling of names and employee IDs to avoid sync or directory errors later.

4. Create User Account Profile

1. Access SnowBe's identity management platform at [<https://id.snowbe.com>].
2. Create the user profile, entering full name, username, department, location, manager, and employee ID.
3. Assign the appropriate baseline RBAC (Role-Based Access Control) role based on job family and region.
4. Add the user to the required Active Directory, application, or security groups according to their baseline RBAC role or HR request.
 - Tip: Always use standardized RBAC templates to maintain consistency and enforce least privilege.

5. Create User Mailbox Account

1. Access SnowBe's corporate email platform (Microsoft 365, Google Workspace, or AWS WorkMail).
2. Create a new mailbox using the employee's SnowBe username and official email format (firstname.lastname@snowbe.com).
3. Assign the mailbox to the correct department distribution group as indicated by HR.
4. Enable spam filtering, anti-phishing protection, and encryption.
5. Confirm mailbox synchronization with the identity management platform and verify MFA is enforced for mailbox login.
 - Tip: Send a test message to confirm delivery and verify mailbox visibility in the global address list.

6. Configure Authentication and MFA

1. Generate a temporary password that meets SnowBe's password complexity standards.
2. Require the user to change the password at first login.
3. For service accounts, generate unique long-lived credentials and store them in the approved credential vault.
 - Warning: Do not send passwords or secrets via email or chat. Use SnowBe's approved secure delivery system.

7. Configure Remote Access Permissions

1. Grant VPN or secure remote access based on the user's job role and region.
2. Ensure MFA is required for all remote connections and administrative access.
3. Confirm firewall and network policies restrict access to authorized devices and IP ranges.

4. Test the connection to verify logs capture session activity.
 - Warning: Never enable remote access before identity verification and MFA setup are complete.
 - Tip: Restrict remote access to approved user groups such as IT, developers, or management to reduce risk.

8. Assign Application and System Access

1. Apply group-based or role-based access to approved applications such as AWS IAM, CRM, accounting, and point-of-sale systems.
2. Record any direct permission exceptions with justification and expiration dates in the ITSM ticket.
 - Tip: Verify each user's access aligns with the principle of least privilege to prevent excessive permissions.

9. Allocate Software and SaaS Licenses

1. Assign the necessary software or SaaS licenses for each approved application.
2. Record assigned license IDs or seat numbers in the ITSM ticket for audit tracking.

10. Send Secure User Notifications

1. Send the new user a welcome message with MFA setup instructions, VPN connection steps, and policy acknowledgment links.
2. Provide credentials through SnowBe's secure delivery method separate from email.
 - Tip: Include onboarding materials such as FAQs or quick start guides to reduce support requests.

11. Validate Account Access on Start Date

1. On the user's first day, the Hiring Manager confirms successful login, MFA enrollment, and proper application access.
2. Immediately correct any missing or excessive privileges.
 - Warning: Users must never share credentials or reuse temporary passwords. Violations may result in disciplinary action.

12. Verify Logging and Monitoring Setup

1. Verify that account creation and access events appear correctly in the identity management and security logging systems.
2. Confirm alerts are active for privileged account activity.
 - Tip: Perform a test login and confirm that logs show accurate user details and timestamps.

13. Document Evidence and Update Records

1. Attach screenshots, access logs, or evidence of role assignments to the ITSM ticket.
2. Update the Access Registry with assigned roles, privileges, and ticket references.

14. Close Ticket and Notify HR

1. Close the ITSM ticket once all provisioning tasks are complete and validated.
2. Notify HR that the new account is active and verified so personnel records can be updated.
3. Schedule a manager access attestation within 30 days of onboarding and include the account in the quarterly access review.
 - Tip: Use automated ITSM reminders to track attestation due dates and maintain compliance.

Exceptions/Exemptions

Requests for exceptions must be submitted in writing to SnowBe Online's IT Security Manager for review and approval. Each request must include the business justification, defined scope, duration, and any compensating controls that will be applied. All approved exceptions will be formally documented, reviewed periodically for continued appropriateness, and remain valid for no longer than one year unless re-evaluated and re-approved.

Enforcement

Failure to follow this policy may result in disciplinary action, beginning with a verbal warning and escalating to written notice, suspension of system access, or termination of employment. Contractors and vendors who violate SnowBe Online's security or compliance requirements may have their access revoked or contracts terminated. Intentional or severe violations, especially those involving customer data or payment systems, may lead to termination and potential legal or regulatory action under applicable laws.

Version History Table

Version #	Implementation Date	Document Owner	Approved By	Description
1.0	10/29/2025	Jarred Ward	IT Security Manager	Original Draft
2.0	11/17/2025	Jarred Ward	IT Security Manager	Updated Account Creation Procedure
